

A citizen science analysis of *Kepler* data

The screenshot shows the Zooniverse website interface. At the top, the Zooniverse logo is displayed with the tagline "REAL SCIENCE ONLINE". Navigation links for "Projects" and "About us" are visible, along with a user login "Signed in as: zookeeper". A main banner features the text "With your help, we are looking for planets around other stars" and the URL "planethunters.org". Below the banner, a category filter shows "Space" selected. A "Sort by" dropdown menu is set to "Category". Four project cards are displayed under the "Space" category:

- How do galaxies form?**
NASA's Hubble Space Telescope archive provides hundreds of thousands of galaxy images.
- Explore the surface of the Moon**
We hope to study the lunar surface in unprecedented detail.
- Study explosions on the Sun**
Explore interactive diagrams to learn out about the Sun and the spacecraft monitoring it.
- How do galaxies merge?**
One important area of research in astronomy studies the role of interacting galaxies.

Would you like to discuss this star?

YES NO

Type of star: Dwarf
Apparent visual magnitude: 14.9
Temperature: 5440 (K)
Radius: 0.9x Sol

★ MARK AS FAVORITE DOWNLOAD DATA

DAYS FROM BEGINNING OF THE QUARTER

Detailed description: The image shows a screenshot of the Planet Hunters website. At the top, there's a browser window with the URL www.planethunters.org/?ticket=ST-1326035103r3A23D7B1CF90E41850. Below the browser, the website header includes 'planethunters.org' and navigation links like 'CLASSIFY', 'ZOOKEEPER', 'ABOUT', 'CANDIDATES', 'TALK', 'TUTORIAL', and 'PLANETOMETER'. The main content area features a scatter plot of star positions with a blue box highlighting a specific star. Below the scatter plot is a radial velocity plot showing the star's motion over time. To the right of the scatter plot is a call-to-action bubble asking 'Would you like to discuss this star?' with 'YES' and 'NO' buttons. Below the bubble, star properties are listed: Type of star: Dwarf, Apparent visual magnitude: 14.9, Temperature: 5440 (K), and Radius: 0.9x Sol. At the bottom right, there are links for 'MARK AS FAVORITE' and 'DOWNLOAD DATA'. The x-axis of the scatter plot is labeled 'DAYS FROM BEGINNING OF THE QUARTER' and ranges from 0 to 31.

klanjin

Congratulations for a v
Transits are very well-f
very consistent transit

MAST has data from Q
yield a smoothed cur

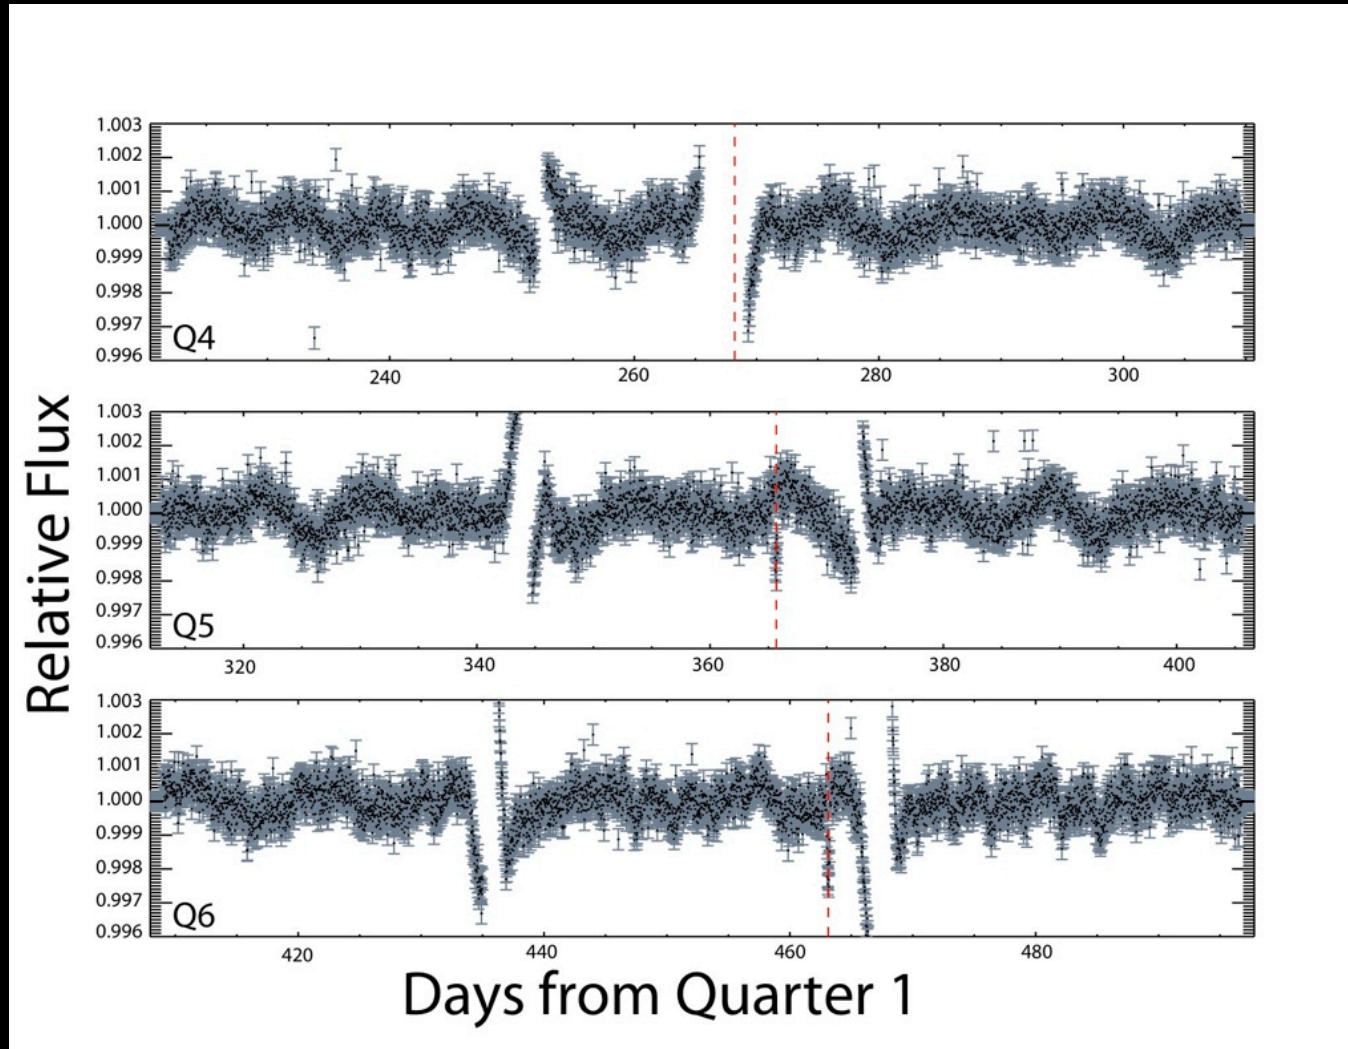

All 5 transits were isolated and stacked, a 15-point moving average calculated and a transit curve fitted to that:

KID 8552719 folded at 88.408

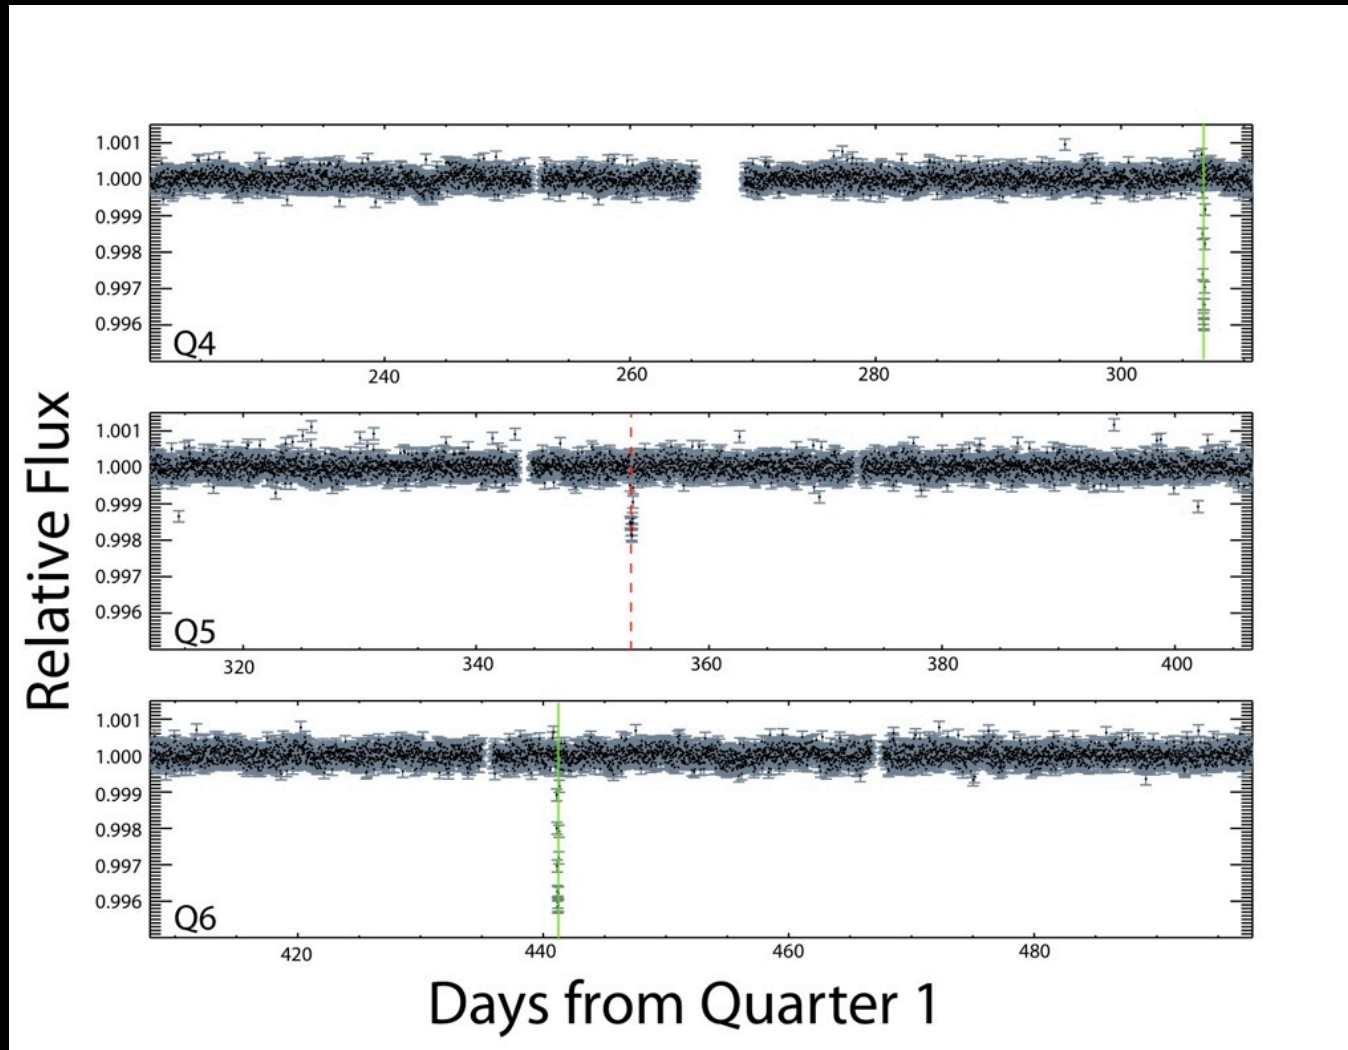

Normalized SAP_FLUX

Phase

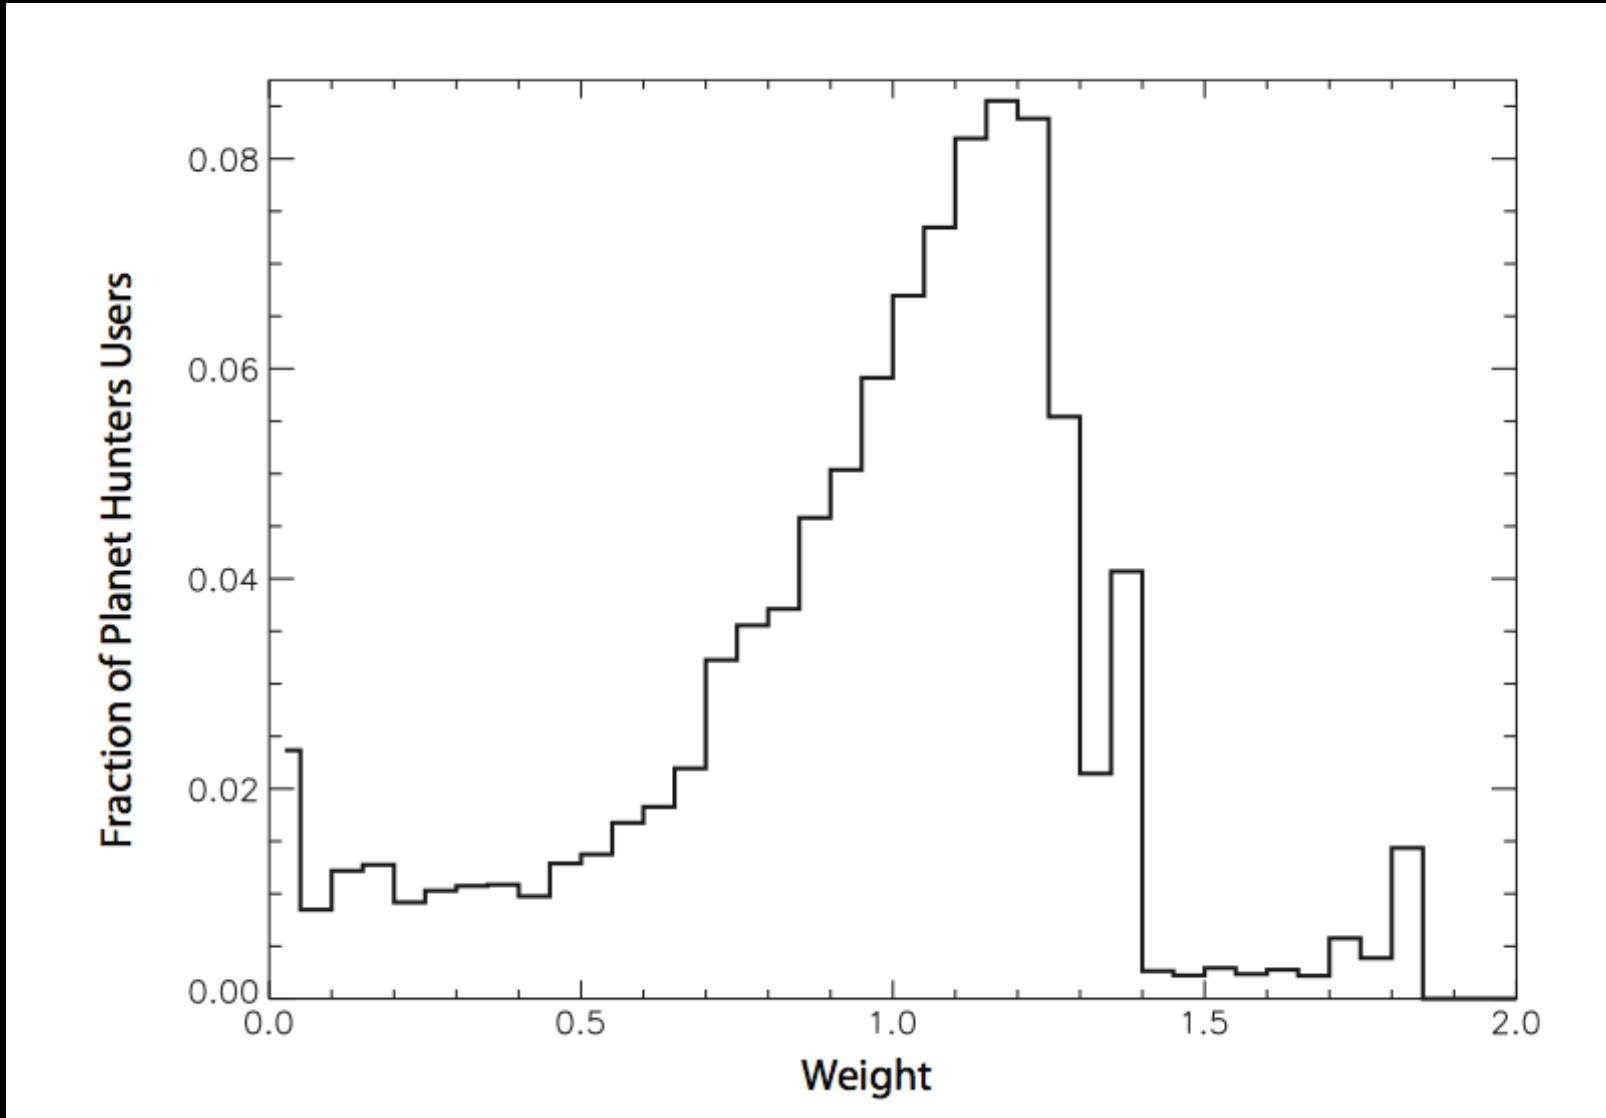

Based on an estimated depth of 0.0018, we have a 3.813 RE planet with an orbit of 0.377AU. The observed transit duration is 12.7hr, much longer than the calculated central transit. It is possible that planet is in an eccentric orbit and the transit is observed close to apastron.

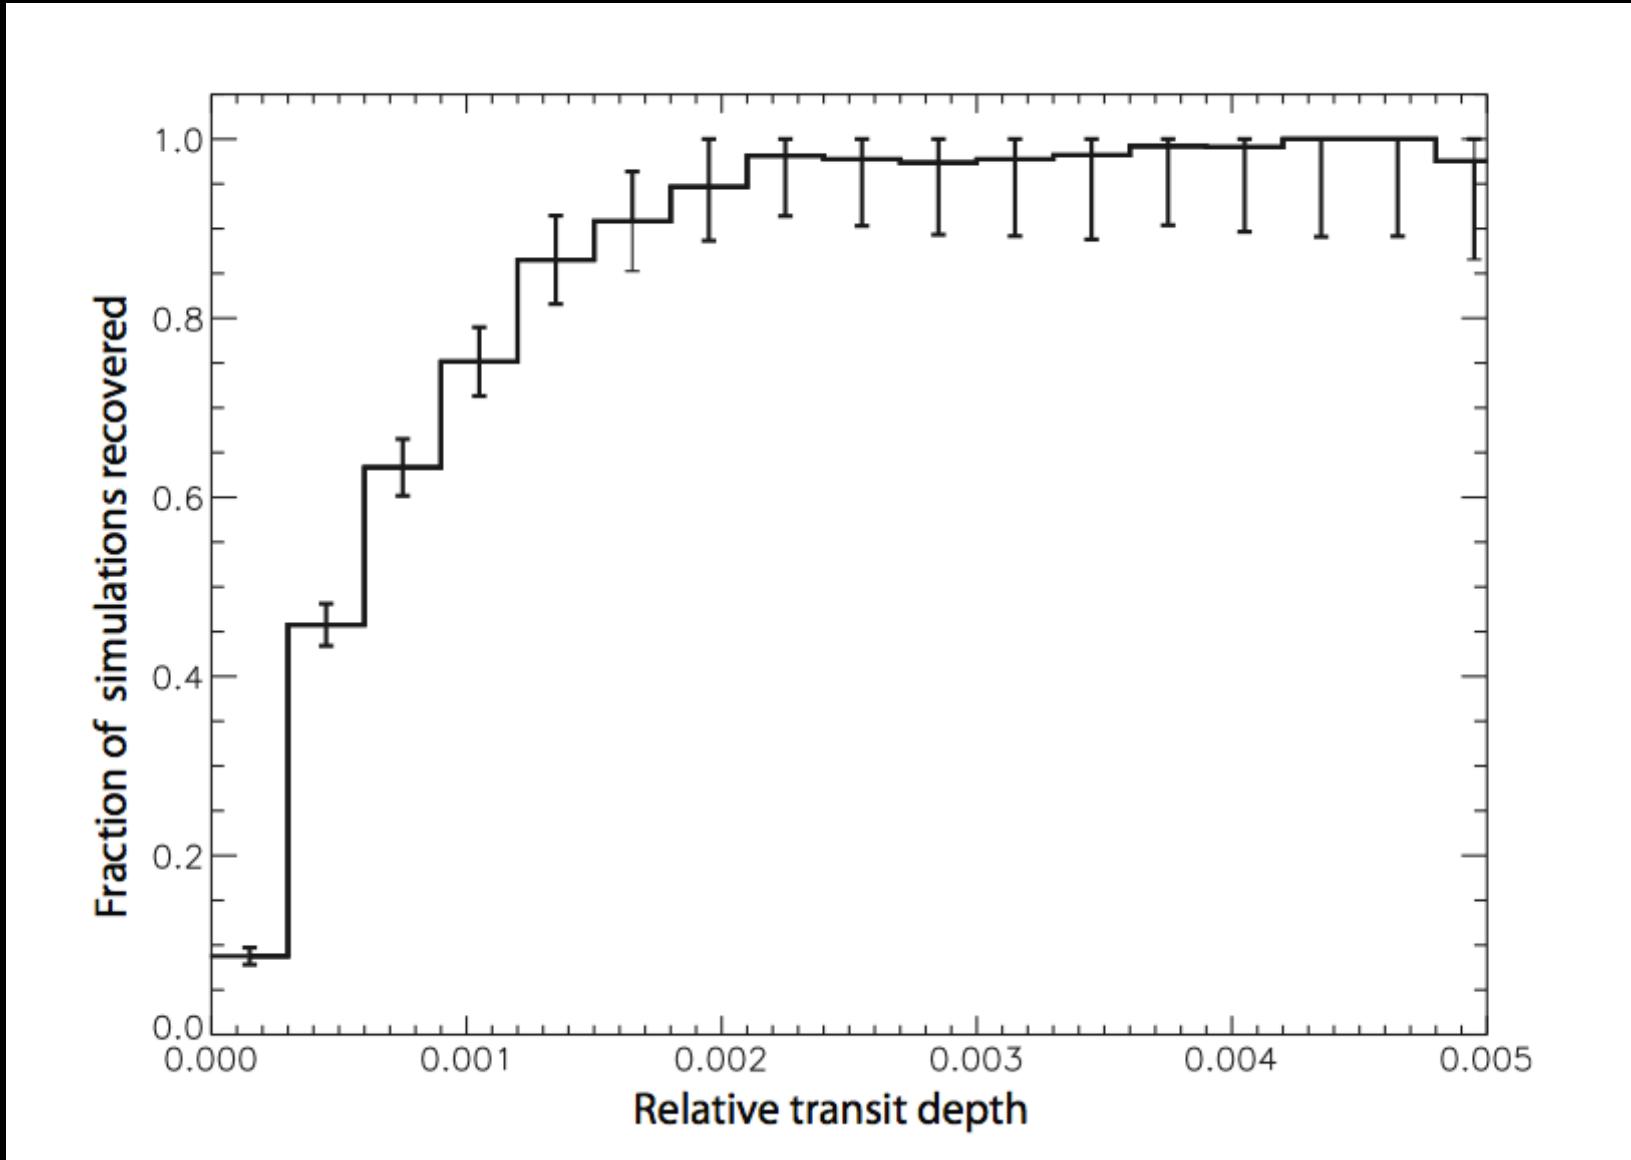

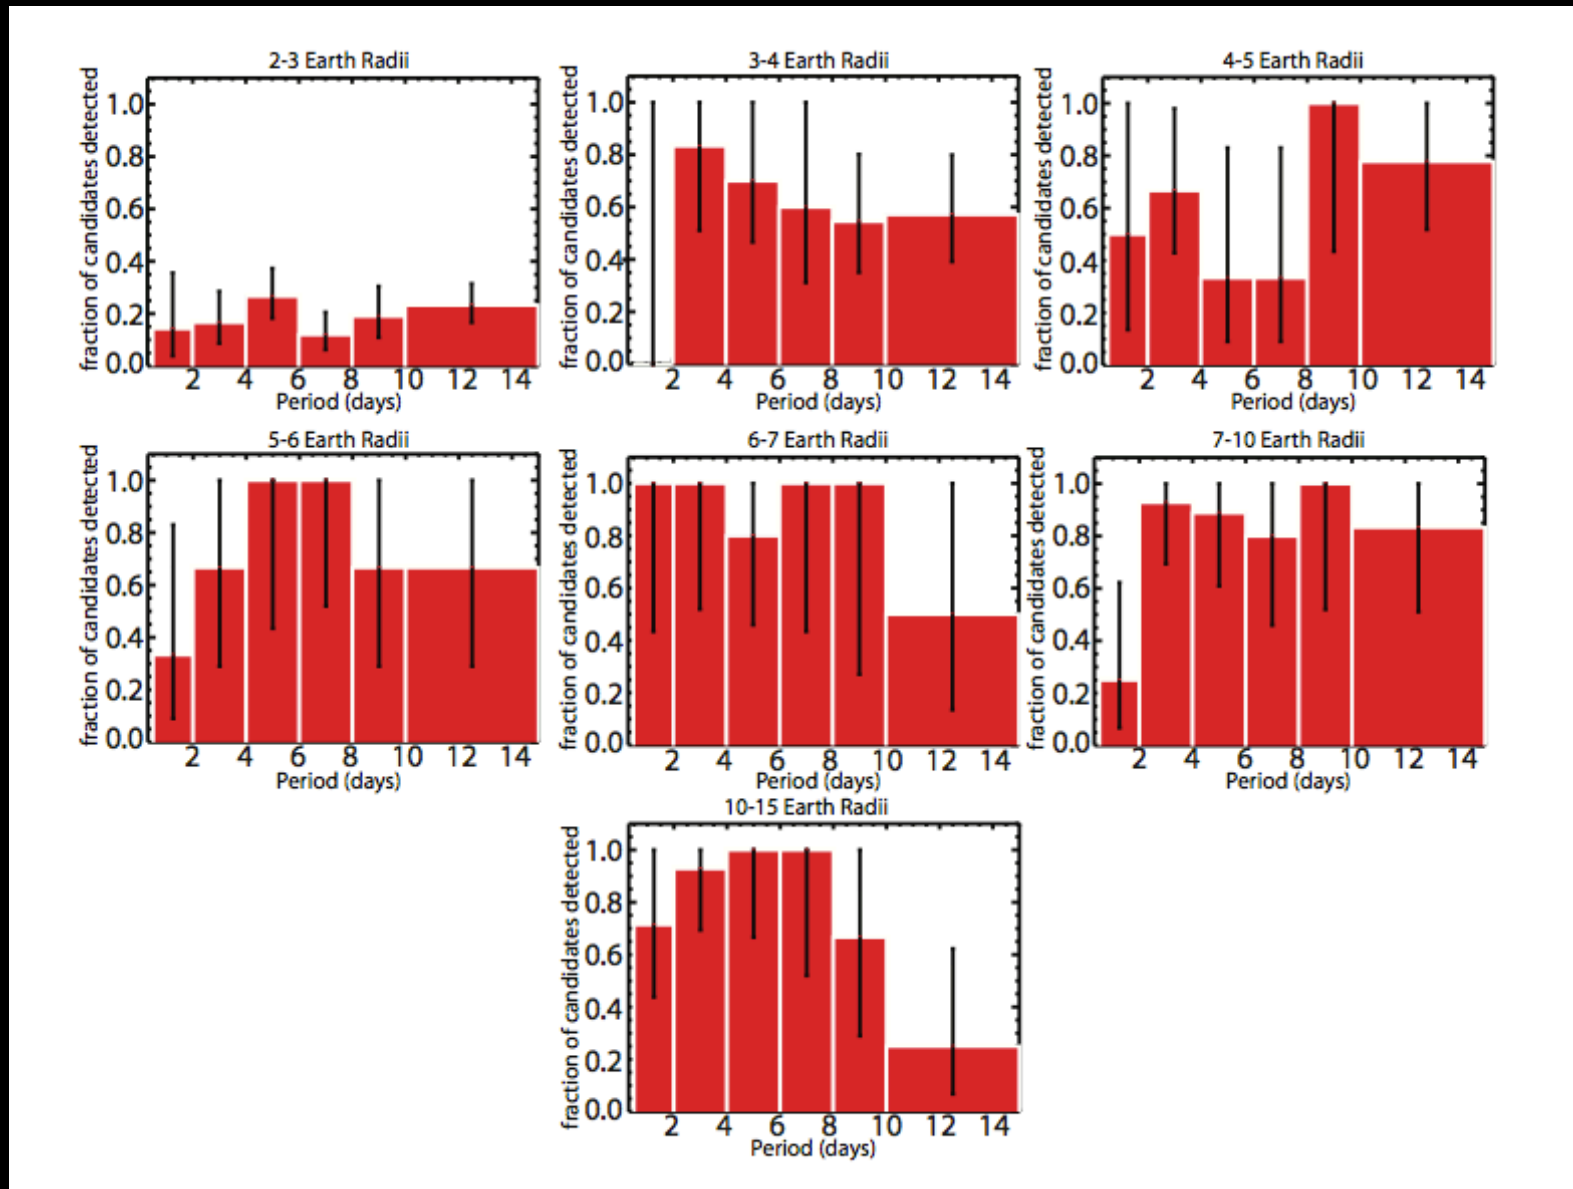

Preliminary fits : 97.46 day period, $R=4.05 R_{\text{Earth}}$

Preliminary fits : 284.03 day period, $R=3.79 R_{\text{Earth}}$

Thanks to :

The **Planet Hunters** team including Debra Fischer & Meg Schwamb (Yale)

The **Zooniverse** team especially Arfon Smith & Stuart Lynn (Adler Planetarium), Rob Simpson (Oxford)

The **Kepler** team especially Natalie Batalha, Jon Jenkins & Tom Barclay
