

## A New Noodley Measure of Awesomeness

The symbol for the Church of the Flying Spagetti Monster is  $\text{☞}$ , woop! One could now use it as a unit. I suggest it should be used as a measurement of coolness (or indeed awesomeness, which is physically equivalent), which I will define as:

$$1 \text{☞} = 10^{21} \text{Fonzies} = 1 \text{ZFo} , \quad (1)$$

where a coolness value of 1 Fo is the coolness of Arthur Herbert Fonzarelli (aka “Fonzie”, aka “The Fonz”). Anybody from Le Système International d’Unités wishing to incorporate this unit as new base unit of measurement is most welcome to.
