

Michael Peel

Planck Postdoc

- Co-organised this infernal symposium.
(But fled the continent to avoid attending!)
- My research has spanned from galaxy clusters, to our Galaxy, to planets, to our atmosphere
(Have even worked on data containing stars - but originally thought they were cosmic rays!)
- PhD was on the SZ effect and the One Centimetre Receiver Array in Torun - mix of technical, observational and theoretical.
(Lots of programming, fiddling around with the telescope receivers, and learning about foam.)
- Postdoc is working on the Planck satellite data, understanding Galactic foregrounds.
(They won't let me go and visit the telescope. :-()
- Planck work is currently secret, so I can't tell you what I'm currently working on yet!
(But see if you can spot the hint!)
